EDUCATION

Bachelor of Science (BSc): Computer Science, Minor in English
Toronto Metropolitan University, Toronto, ON

June 2025

EXPERIENCE

Retail Store Associate, Winners

June 2024 - Present

- Deliver exceptional customer service in a fast-paced environment, assisting hundreds of customers each week while maintaining a professional and solution-oriented approach.
- Prioritize and manage multiple responsibilities simultaneously, consistently completing assigned tasks efficiently in a high-volume retail setting.
- Collaborate with team members to maintain an organized sales floor and ensure daily operational goals are met.
- Maintain accurate merchandise organization and inventory placement, demonstrating strong attention to detail and organizational skills.
- Resolve customer questions and concerns by identifying appropriate solutions and escalating issues when necessary.
- Adapt quickly to changing priorities and workload demands while maintaining high standards of customer service.
- Develop a comprehensive understanding of store operations and processes to improve efficiency and support team productivity.
- Contribute to a safe, organized, and welcoming environment by following company procedures and loss prevention practices.

PROJECTS

YA Series Analytics Dashboard

Dec 2025

Full-Stack Developer

- Developed an interactive web dashboard using HTML, CSS, and JavaScript, integrating Chart.js for dynamic bar charts displaying average ratings and total pages per YA book series.
- Implemented a search and filter feature with JavaScript to allow dynamic queries by series name, book title, average rating (rating > #), and total pages (pages < #).

To-do list

Dec 2025

Full-Stack Developer

- Developed a priority-based to-do list with a clean, pastel UI and dynamic task sorting to improve clarity and user workflow.
- Implemented localStorage persistence to save tasks, priorities, and statuses.

Roast and Rows Analytics

Aug 2025

Database & Data Analytics Developer

- Developed an analytics project for a fictional coffee shop, using database queries to analyze business data and generate actionable insights.
- Designed and executed SQL queries to explore relationships within datasets and support data-driven analysis.

HACKATHONS

WeDesignTech Hackathon

Designing and Pitching

- Created a prototype app to help bikers optimize city navigation, enhancing usability and route efficiency.
- Designed app layout and functionality, presenting an interactive Figma demo to convey UX.

SerenityHacks Hackathon

Building and Pitching

- Built an API for mental health resources to improve filtering by resource type.
- Scraped and organized data into a usable API, presenting a frontend design that leveraged the API.
